

KOKUYO

KOKUYO ING *ing*
360° Gliding Chair

Feel of becoming one with the chair.

ing has a gliding mechanics that moves 360° freely with subtle movements of the human body.

Just sitting on it provides a comfortable rhythm that activates creative thinking.

360° gliding allowing free movements of the body

Two combined layers of the ing mechanics follow any movement of the body including leaning forward and backward and twisting left and right. Spring-less mechanics similar to that of a swing does not impose a load at initial motion so that you can move easily. Furthermore, there is a swing back after a movement, so you can tilt your body at ease without losing balance.

The mesh type is now available!
 360° gliding chairing that allows you to
 select your most comfortable position.

Various types providing you with different gliding feels.

Vertical type
 (cushion type)

Equipped with a tilt mechanics moves smoothly while you lean on the backrest. The mechanics give you the comfort of swaying while leaning on the wide backrest.

Lateral type
 (cushion type)

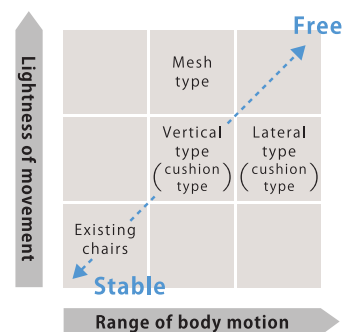

This type has a stronger side support and a lower backrest, allowing you to stretch yourself freely.
 * No tilt mechanism equipped.

Mesh type

The mesh backrest follows the movement of your body so that you can sway more lightly, unconsciously, and naturally. Although tilt mechanics is not equipped, the mesh backrest flexibly supports your body.

Gliding feel

- Lightness of movement = Smaller force required to change your posture
- Range of body motion = Scope of the movement of the body

Select the type that suits your work.

Adjusts to your posture naturally when you lean forward to work at the computer.

Twist your body while gripping the armrests to refresh yourself.

Lean back to ponder.

Refresh yourself with unrestricted postures

Mesh type that enables lighter movement

Various functions that achieve effective gliding

Lumbar-less design
that eases your backbone

The 360° gliding forms a natural S-shape of the backbone, which eliminates the need for a lumbar support. Your backbone is released, so you can move easily.

Grip arms
that allow you to sway at ease

The armrests are completely fixed. The front section of the pad is covered by a cushioning material, so you can sway at ease gripping the armrests. All models have grip arms as standard.

Gliding stopper
with on/off modes

You can switch between the gliding mode and the non-gliding mode, which you can use when you want to concentrate on your work.

3D posture support seat
that adequately distributes the body pressure

The posture support of ing, which is deeper than ever, adequately distributes the body pressure and prevents the sliding of your body when you lean forward.

Front free tilt
that eliminates the need for the adjustment of the seat depth

The front section of the seat bends so as not to press the back of your thighs when you lean backward. You do not have to adjust the depth of the seat because not much pressure is put on your thighs even if your back is short.

Activate your work.

The lateral cushion type with a low backrest does not crowd the office much to stage a spacious and free office.

Being able to move your body more freely, these type suits meetings in a free-address office and brainstorming.

Move more lightly and flexibility.

The vertical type with the transparent mesh backrest stages the office with the sense of lightness. The lightness and flexibility of the mesh material better support your body and allows you to move more lightly. This type suits fixed seats in which you stay a long time.

Dynamism to executives.

The vertical, cushion type, which has a high affinity with existing chairs, suits not only ordinary offices but also executive rooms that require a classy tone. The comfortably cushioning backrest supports your body firmly so you can sway naturally.

Use ing with a height-adjustable desk.

By using ing with a height-adjustable desk, you can sway regardless of whether you are sitting or standing. For better affinity, the mesh type and vertical type (cushion type) are recommended.
