

# Caravel

Versatile and Comfortable. Caravel is versatile and easy to handle. Comfortable and durable

## The 3D surface shape based on ergonomics firmly supports the body and provides comfortable sitting comfort.

Although it is a lightweight chair, the three-dimensionally molded curve of the back firmly supports the lower back and reduces the strain on the frame for larger people.

### Developed mesh material with excellent ventilation and body pressure distribution

The three-dimensionally molded frame and newly developed mesh dissipate heat and disperse body pressure. Provides excellent seating comfort and fit even when used for long periods of time.

### Lightweight Design

It is lightweight and reduces the burden of setting up in large spaces. The stainless steel legs are only 3.8kg (circle leg type).

### Structure that can be disposed off separately

It can be disassembled into individual parts, allowing for parts replacement and separate disposal.

## Selection

**Circle Leg Type**  
Back mesh type without arms
